

## California Lockheed Air Terminal D

---

### ***Facility and Location***

Lockheed Air Terminal D is located in Burbank, and was built in 1930. The site was transferred to Air Force Plant No.14 on September 1, 1954.

### ***Media Sampled and Findings***

In the summer of 2003, the California Regional Water Quality Control Boards requested information from DoD regarding perchlorate in drinking water. DoD worked with California regulators to establish an interagency working group and a methodology for prioritizing sites for sampling to determine the extent of the problem potentially attributable to DoD. The California Perchlorate Sampling Prioritization Protocol allows California to assist DoD in prioritizing the investigation of suspected sites and to focus resources on the sites that may have the greatest impact to the public. Lockheed Air Terminal D was identified as a site for additional consideration and possible sampling per the California Perchlorate Site Prioritization Protocol. A records search identified no evidence of solid propellant storage or use at the Burbank site during the period of government control.

### ***Appropriate Actions***

On June 4, 2008, the Los Angeles Regional Water Quality Control Board agreed with finding that this site is not a source of perchlorate.
